

Peachtree
PROTECTIVE COVERS

Solar Control Devices

FEMA Office & Warehouse
Winchester, Virginia

Contractor: Harvey Cleary Builders

Architect: Kaplan McLaughlin Diaz Architecture

www.peachtreecovers.com

PPC is able to provide the design professional an assortment of exterior solar control devices to help in reducing solar heat gain within and along building structures. Using a variety of materials and styles we can provide vertical, horizontal, cantilevered or inclined projections that meet your design criteria. Blade configurations and spacings can be varied to filter up to 80% of the sun's heat and light level. Dynamic wind loads are a consideration with this type of application. Support rods and connecting hardware may be used from above or below to address design loads and aesthetic values. Support rods may be extruded aluminum or stainless steel.

Plyler Hall at Furman University
Greenville, South Carolina
Contractor: Rodgers Builders
Architect: Balingier

One City Center
Atlanta, Georgia
Contractor: Osbourne & Associates
Architect: Wakefield Beasley & Associates

With our ongoing development of new solar control devices we can provide today's architect the timeless and maintenance free features and solutions starting from conception through the final installation. Call for additional information on blade and outrigger configurations.
